

# SEEKING RESEARCH PARTICIPANTS WHO HAVE HAD A CONCUSSION

This research investigates treatment for symptoms that impact daily life after concussion or mild TBI

## ABOUT THE STUDY:

### Who is Eligible?

1. Between 18–80 years of age
2. Diagnosis of mild traumatic brain injury/concussion
3. At least 3 months post-injury
4. No history of epilepsy or active seizures
5. Ability to safely participate in MRI

### STUDY ACTIVITIES

- Tests of thinking, memory, and attention
- Self-report of daily function and mental health
- MRI
- Experimental brain stimulation (transcranial magnetic stimulation)

### STUDY LOCATION

Moody Neurorehabilitation Institute  
Space Center-Nassau Bay, TX

## MORE INFORMATION

Time commitment includes up to 9 weeks of involvement with 4 weeks of active treatment.

You will be compensated for your time and travel/parking as needed.

Study Title: Neuromodulation and Neurorehabilitation for Treatment of Functional Deficits after mTBI plus PTSD  
PI: Theresa Bender Pape NU IRB: STU00203773

[clinicaltrials.gov/study/NCT03819608](https://clinicaltrials.gov/study/NCT03819608)

## STUDY PURPOSE

The purpose of this study is to determine the effect of brain stimulation paired with cognitive intervention has on improving functional outcomes after mTBI with or without PTSD.
